score Pred. No. greater is the number of ter than or equal of results predicted by equal to the score of the result to have a being printed,

and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes human defensin (Def-X). The Def-X CC polypeptide can be used as an antiparasitic agent or CC a pesticide. The Def-X polypeptide can be used as a cytostatic (especially anticancer) agent, and as an agent for modulating processes CC of inflammation, tissue repair and endocrine (especially corticostatic) cregulations. The polypeptide can be used in a composition for external CC containing Def-X can be used for prevention and treatment of microbial and parasitic infections, especially where the microbial or parasitic infections are Gram-positive or -negative bacterial infections or infections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, cespecially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for enhancing immunity, cespecially in the case of AIDS, or preventing immune deficiency, cespecially in the treatment of psoriasis, as well as for modulating inflammatory processes, especially in the case of chronic inflammatory

The Def-X CC polypeptide can be used as an antimicrobial, antiparasitic agent or CC a pesticide. The Def-X polypeptide can be used as a cytostatic confinity anticancer agent, and as an agent for modulating processes CC of inflammation, tissue repair and endocrine (especially corticostatic) CC regulation. The polypeptide can be used in a composition for external CC containing Def-X can be used for prevention and treatment of microbial containing Def-X can be used for prevention and treatment of microbial CC and parasitic infections, especially where the microbial or parasitic infections are cram-positive or -negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral compositions can used for prevention and/or treatment of cancers, compositions can used for prevention and/or treatment of cancers, compositions can used for prevention and/or treatment of cancers, compositions can used for prevention and/or treatment of cancers, composition the case of AIDS, or preventing immune deficiency, composition the case of AIDS, or preventing immune deficiency, composition in the case of AIDS, or preventing immune deficiency.

New method for mass production of antimicrobial peptides - by constructing fusion genes comprising acidic and antimicrobial peptide genes and transforming host with vector containing th these

Example 6; Page 18; 52pp; English.

The invention relates to mass production of antimicrobial peptides. The combined comprises constructing a fusion gene containing a first gene cancoding a negatively charged acidic peptide having at least two cysteine cresidues, and a second gene encoding a positively charged basic antimicrobial peptide. A host microorganism is transformed with a vector containing the fusion gene and then cultured. The expressed antimicrobial peptides in recombinant microorganisms. The inhibitory effect of the expressed antimicrobial peptide upon the growth of the host microorganism is considerably reduced by fusing it to the acidic peptide. Therefore, the use of the fusion gene provides an economic, recombinant alternative of mass producing antimicrobial peptides, which overcomes the disadvantages of low-productivity and poor economy, previously encountered by recombinant and chemical methods. The present sequence represents the DNA encoding an antimicrobial peptide HNP-1. This can be used along with the acidic peptide Guamerin gene in the

The DNA, under the control of a regulatory sequence operable in the cost, and expressing the peptide in the transformed host. The 2nd method comprises transforming an E. coli PD K-12 cell with a vector that expresses a cleavable fusion protein, comprising at least part of a carbohydrate binding protein (CBP) and the peptide, expressing the expressing the protein to obtain the cell and cleaving the protein to obtain the peptide substantially free of CBP residues. These methods for producing and processing human NP-1 allow high levels of the peptide to accumulate in certain PD microbial host cells, despite the peptide anti-microbial potency, and efficient recovery of the full lengtide anti-microbial potency, and efficient recovery of the canalogous peptides, exhibits a broader range of activity and/or peptide may be used as an anti-parasitic, anti-fungal, anti-tumour,

                                 The present DNA sequence encodes an antimicrobial peptide, human alpha defensin. It is used along with a derivative of purF gene sequence that functions as a fusion partner. A DNA construct that comprises, this antimicrobial peptide encoding sequence and the entire, partial or derivative of purF gene, is used for mass production of the antimicrobial peptide in microorganisms without killing the host cells. Use of the purF gene derivative sequence, neutralises the toxicity of the antimicrobial peptides against the host microorganism. The antimicrobial peptides are
                                                                                                                                                                                          New DNA constructs useful in microorganism hosts -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match:
                                                                                 The invention relates to a genetic component which mass-produces peptide antibiotics effectively from microorganisms. The genetic component consists of a first gene sequence which codes for the whole or partial purf gene or its derivative, and a second gene sequence which codes peptide antibiotics. The mass-production method of peptide antibiotics comprises the steps of; constructing an expression vector including the genetic component, transforming a bacterial host cell with the vector, culturing the transformed cell to express the genetic component, and recovering the peptide antibiotics. The expression vector is selected from the group consisting of pGNN2, pGNN3, pGNN3 and pGNN5, and it has a high copy number of origin, strong transcription promoter and structural gene. The sequences given in records ABL60400-ABL60464 represent DNA sequences of the invention.
                                                                                                                                                                                                                                                                      Disclosure; Page 16; 56pp; Korean.

                                                                               The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Percent Similarity:
Best Local Similarity:
(I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonuclectides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adhesion molecules and their receptors, contral nervous system (CNS) and peripheral nervous and non-nervous system
                                                                                                                                                                                                                                                                                                     trigger

The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the

SEQ ID NO:11 to 1680 (AAA32323 to AAA3392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence listing.
                                                                                                 06-SEP-2000
                                                                                                                                                                                              Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                          06-OCT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiaethmatic, cytostatic and analgesic activities. The compositions are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 612; 1343pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for the treatment of diseases associated with inflammation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is one of a large number of 5' ESTs derived from CC mkNAs encoding secreted proteins. No ORF has yet been conclusively CC identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) CC for the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design cexpression and secretion vectors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The precise position of the CDS is unsure due to the 13 unidentified nucleotides at the 5' end of the sequence. The most likely position for initiation of translation occurs at nucleotide 94 and the open reading frame following this point is claimed. The first 18 codons of the claimed ORF (excluding the ATG) encode a sequence of amino acids that resembles other leader sequences and their cleavage sites. The mrs sequence was isolated as clone C-AJ (ATGC 39868) from a cDNA library constructed from total RNA from a patient suffering from chronic phase, Ph'-positive CML. The mrs is localised to human chromosome 8, specifically to bands 8q21.1-23.

The method comprises: (a) determining the expression level of defensin 1 gene in the biological sample from a patient; and (b) comparing the expression level with that in the sample of a healthy individual. The method is for examining allergic diseases particularly atopic dermatitis and its diagnosis, which is also applicable in screening candidate compounds for remedies. The present sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain vectors.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 43,

Sequence 43, Application US/08282030

Patent No. 5589364

GENERAL INFORMATION:

APPLICANT: Pierce, James C.

APPLICANT: Anderson, Mark G.

APPLICANT: Anderson, Mark G.

APPLICANT: Anderson, Mark G.

TITLE OF INVENTION: Recombinant Production of Biologically

TITLE OF INVENTION: Active Peptides and Proteins

NUMBER OF SEQUENCES: 62

CORRESPONDENCE ADDRESS:

ADDRESSEE: Finnegan, Henderson, Farabow, Garrett & STREET: 1300 I Street, N.W.

CITY: Washington

STATE: D.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER READABLE FORM:

i Sequence 50, Application US/08282030

i Sequence 50, Application US/08282030

i Patent No. 558364

i GENERAL INPORMATION:

APPLICANT: Williams, Jon I.

APPLICANT: Malerson, Mark G.

APPLICANT: Rail, Presad

TITLE OF INVENTION: Recombinant Production of Biologically

TITLE OF INVENTION: Recombinant Production of Biologically

TITLE OF INVENTION: Active Peptides and Proteins

NUMBER OF SEQUENCES: 62

CORRESPONDER ADDRESS:

ADDRESSEE: Dunner

STREET: 1300 I Street, N.W.

CITY: Washington

STRATE: 10.C.

COMPITER: Tam PC compatible

COMPUTER: Tam PC compatible

COMPUTER: Patentin Release #1.0, Version #1.25

CORPERATION NUMBER: 32,984

CLASSIFICATION: NUMBER: 32,984

CLASSIFICATION INFORMATION:

NAME: PORTIS, John NUMBER: 32,984

TELEPHONE: 202-408-400

TELEPHONE: 202-408-400

TELEPHONE: 202-408-400

TELEPHONE: ASHARCTERISTICS:

LENGTH: 123 base pairs

TYPE: nucleic acid

TYPE: nucleic acid

TYPE: nucleic acid

SEQUENCE CHARACTERISTICS:

LENGTH: 123 base pairs

TOPOLOGY: 1:nes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              123

polypeptide can be used as an antimicrobial, antiparasitic agent or a pesticide. The Def-X polypeptide can be used as a cytostatic agent or cespecially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) regulation. The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions containing Def-X can be used for prevention and treatment of microbial and parasitic infections, especially where the microbial or parasitic infections are Gram-positive or -negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral infections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, especially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for enhancing immunity,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents human defensin (Def-X) fragment. The Def-X polypeptide can be used as an antimicrobial, antiparametric agent or a pesticide. The Def-X polypeptide can be used as a cytostatic agent (especially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) regulation. The polypeptide can be used in a composition for external contraining Def-X can be used for prevention and treatment of microbial containing Def-X can be used for prevention and treatment of microbial and parametric infections, especially where the microbial or paramitic infections are associated with enveloped viruses, especially HSV and HIV.

The compositions can used for prevention and/or treatment of cancers, compositions or used for prevention and/or treatment of cancers, compositions or used for prevention and/or treatment of cancers, compositions or liver cancer, profette cancer, non-small-cell ung cancer or colorectal carcinoma, and for enhancing immunity, especially in the treatment of psoriamis, as well as for modulating
                                                                                                                   ö
                                                                                                                                           9
                                                                                                                                                                   9
especially in the case of AIDS, or preventing immune deficiency, especially in the treatment of psoriasis, as well as for modulating inflammatory processes, especially in the case of chronic inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides weeters comprising the nucleic acids encoding the polypeptides and cells genetically the proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to have a set and in the processing the proteins are useful in genetic vaccination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AANI29310-AAJ33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of human polypeptides, useful in genetic

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            42,

The present sequence represents human defensin (Def-X). The Def-X polypeptide can be used as an antimicrobial, antiparasitic agent or a pesticide. The Def-X polypeptide can be used as a cytostatic capt. The polypeptide can be used as a cytostatic for especially anticancer) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) regulation. The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions and parasitic infections are dram-positive or -negative bacterial infections are associated with enveloped viruses, especially mere the viral infections are associated with enveloped viruses, especially melanomas, or liver cancer, prostate cancer, non-small-cell ung cancer or colorectal carcinoma, and for enhancing immunity, especially in the crastment of psoriasis, as well as for modulating infinantary in the treatment of psoriasis, as well as for modulating infinantory processes, especially in the case of AIDS, or prevention inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cyquences Acoston Proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and ostecomyellitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central rervous system, however it is particularly involved in the inflammatory lesions associated with acnes undertoned for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes infections. These antibodies can be used to diagnostic agents for determining P. acnes presence, for example, by charefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by consymptic captus for determining P. acnes presence, for example, by Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO C. at fip. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                  December 17, 2003, 14:50:14 ; Search time 6.944 Seconds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3, Application US/09486580A

Patent No. 6329340

GENERAL INFORMATION:
APPLICANT: GENEST SA

TITLE OF INVENTION: HUMAN DEFENSIN DEF-X GENE AND DNAC

TITLE OF INVENTION: THERAPEUTIC APPLICATIONS

NUMBER OF SEQUENCES: 6

CORRESPONDENCE S:
ADDRESSE: Knobbe, Martens, Olson & Bear

STREE: S50 West C Street

CITY: San Diego

STATE: California

COUNTRY: USA

ZIP: 92101
                                                                                                                                                                                 Sequence 6, Application US/09486580A;
Sequence 6, Application US/09486580A;
Patent No. 6329340

Patent No. 6583275
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 7310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ÷
                                 CURRENT APPLICATION DATA:

SOFTWARE: Patentin Release #1.0, Version #1.30 (EPO)

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/09/486,580A

FILING DATE: FEBRUARY 25, 2000

ATTORNEY/AGENT INFORMATION:

NAME: Hart, Daniel

REGISTRATION NUMBER: 40,637

FREFERENCE/DOCKET NUMBER: GENSET.064C1

SEQUENCE CHARACTERISTICS:

LENGTH: 94 AMINO ACIDS
